request form.

We have built amenities that are ideally suited to the way we work and live. They include:

- Whitehorse International Airport plus 10 community airports.
- Over 4,700 km of all weather roads and a year-round highway system that can accommodate loads up to 77,000 kg.
- A modern telecommunications network with internet access in most communities.
- Clean, stable energy and a recently expanded electrical grid. Hydro produces over 80% of capacity, supplemented by diesel plants and renewable energy (though there remains a large potential for hydro and wind development).
- Year-round road access to ice-free ports in Skagway and Haines, Alaska.
- World-class health services and recreational opportunities. Whitehorse has a new hospital facility with up-to-date equipment and highly trained staff. There are health centres and nursing stations that provide 24-hour care in the rural communities.
- Whitehorse has a number of fitness and recreational facilities and many communities have ice rinks, baseball diamonds and swimming pools.
- Yukon College in Whitehorse offers a large selection of courses for working professionals looking to upgrade their skills and full-time students wanting to establish a career. The college also features smaller campuses located in communities across the territory.
- There are 28 public schools that offer award winning programming in K-12 education. Catholic and French immersion streams also available.
